What is ulcerative colitis?

(UL-sur-uh-tiv koe-LIE-tis)

Ulcerative colitis, also known as UC, is an inflammatory bowel disease.

- It causes inflammation and ulcers (sores) in the large intestine (colon)
- The inflammation and ulcers can last for a long time
- Symptoms usually develop over time, rather than all of a sudden

But there’s good news! There are many treatment options available to treat UC. Your doctor will prescribe the treatment that’s right for you.

Receiving treatment can help reduce signs and symptoms of the disease. While there is no cure, it can even bring about long-term remission in adults.*

What are the common symptoms?

While the signs and symptoms of UC can be different for each person, here are some of the most frequent symptoms people can experience:

- More urgent bowel movements
- Frequent diarrhea
- Bloody stool
- Abdominal pain
- Cramping
- Fatigue
- Loss of appetite
- Unexpected weight loss

More than 80% of people with UC have mild to moderate symptoms. Be sure to tell your doctor if you are experiencing any of the above symptoms.

*Remission means that there is little or no inflammation in the patient’s colon during initial examination based on certain criteria used during a clinical study of mesalamine. Maintaining remission means that inflammation is still not present in a follow-up evaluation 6 months later.

UC affects the inner lining of the large intestine (colon) and rectum

Colon

Rectum

* Remission means that there is little or no inflammation in the patient’s colon during initial examination based on certain criteria used during a clinical study of mesalamine. Maintaining remission means that inflammation is still not present in a follow-up evaluation 6 months later.
What is the cause of UC?

No one knows for sure what causes UC

- Environment and family history may play a role

How is UC treated?

Medications may help

- No known medication can cure UC. However, there are medications that may help you get your or your child’s symptoms under control

- If your doctor has diagnosed your or your child’s UC as “mild to moderate,” you may be given a medicine called an aminosalicylate, or a 5-ASA

- Although the exact way 5-ASAs work is not known, it is believed that they help decrease inflammation in the colon

Why your doctor prescribed DELZICOL

In studies, DELZICOL helped some people 5 years of age and older with mildly to moderately active UC reduce their symptoms associated with UC.

In these studies, people had fewer incidences of rectal bleeding. Most patients experienced reduction in their number of daily bowel movements similar to the number experienced during their non-flare period.

While results may vary from person to person, DELZICOL may help reduce symptoms associated with UC

- Improvement or remission at 6 weeks
- Remission in adults maintained at 6 months

IMPORTANT RISK INFORMATION

What are the possible side effects of DELZICOL?

DELZICOL may cause serious side effects, including:

- Kidney problems: Your doctor may check to see how your kidneys are working before taking DELZICOL. It is important to complete all blood tests ordered by your doctor.

- A condition that may be hard to tell apart from a UC flare: Symptoms include cramping, stomachache, bloody diarrhea, and sometimes fever, headache, and rash. If you experience any of these symptoms while on treatment, call your doctor right away. He or she may tell you to stop taking DELZICOL.

Please see additional Important Risk Information on pages 8 and 9, and full Prescribing Information available at www.DELZICOL.com.
Before starting DELZICOL, tell your doctor about all medications you are taking, including:
- Nonsteroidal anti-inflammatory drugs (NSAIDs), such as ibuprofen and naproxen. Taking these medications with DELZICOL may increase your risk of kidney problems.
- Azathioprine or 6-mercaptopurine. Taking these medications with DELZICOL may increase your risk of blood disorders.

To report a side effect from one of our products, please contact Allergan Medical Information at 1.800.678.1605.

**INDICATIONS**
DELZICOL® (mesalamine) delayed-release capsules is a prescription medication approved for the treatment of mildly to moderately active ulcerative colitis (UC) in patients 5 years of age and older and for the maintenance of remission of UC in adults.

**IMPORTANT RISK INFORMATION**
Who should not take DELZICOL?
- Do not take DELZICOL if you are allergic to:
  - salicylates, such as aspirin or medications that contain aspirin
  - aminosalicylates
  - any of the ingredients of DELZICOL

What should I tell my healthcare provider before taking DELZICOL?
Tell your healthcare provider if you:
- Have or have had kidney problems
- Are allergic to sulfasalazine
- Have or have had heart-related allergic reactions, such as inflammation of the heart muscle (myocarditis) or inflammation of the lining of the heart (pericarditis)
- Have or have had liver problems
- Have or have had a stomach blockage
- Have any other medical conditions

What are the possible side effects of DELZICOL?
DELZICOL may cause serious side effects, including:
- **Kidney problems:** Your doctor may check to see how your kidneys are working before taking DELZICOL. It is important to complete all blood tests ordered by your doctor.
- **A condition that may be hard to tell apart from a UC flare:** Symptoms include cramping, stomachache, bloody diarrhea, and sometimes fever, headache, and rash. If you experience any of these symptoms while on treatment, call your doctor right away. He or she may tell you to stop taking DELZICOL.
- **Hypersensitivity (allergic) reactions:** If signs and symptoms of hypersensitivity occur, immediately call your doctor.
- **Liver failure:** In patients who have or have had liver disease.
- **Blood disorders:** Elderly patients and patients taking azathioprine or 6-mercaptopurine need to monitor complete blood cell counts and platelet counts while taking DELZICOL.

The most common side effects of DELZICOL include:
- **Adults:** belching, stomachache, constipation, dizziness, runny nose, back pain, rash, upset stomach, and flu symptoms.
- **Children (5 to 17 years of age):** inflammation of the nose and pharynx, headache, stomachache, dizziness, inflammation of the sinuses, rash, cough, diaphoresis, tiredness, fever, and increased lipase.

Tell your doctor if you have any side effect that bothers you or does not go away. These are not all the possible side effects of DELZICOL.

Please see full Prescribing Information available at www.DELZICOL.com.
How to start and stay on DELZICOL—4 steps for treatment success

**Starting DELZICOL**

Tell your doctor about ALL the medicines, even vitamins and supplements, you or your child are taking.

- Medicines like DELZICOL may increase the risk of kidney problems, especially when used with nonsteroidal anti-inflammatory drugs (NSAIDs) like ibuprofen
- Tell your doctor if you or your child have had any kidney problems
- DELZICOL may also increase the risk of blood disorders when used with azathioprine and 6-mercaptopurine
- If you or your child have been taking a different 5-ASA, be sure to stop taking it before starting DELZICOL

**DELZICOL has a unique dosage form that may help patients who have trouble swallowing**

Read on to learn more.
Capsule is not actual size.

---

**How DELZICOL may help you achieve your treatment goals**

**There are 2 ways DELZICOL may help**

1. **Reduce the symptoms of UC**
   - **Adults:** The recommended dosage is two DELZICOL 400 mg capsules 3 times daily (total daily dose of 2.4 grams), with or without food, for a duration of 6 weeks
   - **Pediatric patients 5 years of age and older:** Total daily dose is weight-based up to a maximum of 2.4 g/day, with or without food, divided into 2 daily doses for a duration of 6 weeks

2. **Maintain remission of UC in adults**
   - The recommended dosage is 1.6 g/day in 2 to 4 divided doses, with or without food

Always take DELZICOL exactly as your doctor prescribes.

---

Please see Important Risk Information on pages 8 and 9, and full Prescribing Information available at www.DELZICOL.com.
Delayed-release capsule containing four 100 mg tablets

Dosage Form and Administration

Capsules can be opened for patients who cannot swallow whole

Two DELZICOL 400 mg capsules cannot be substituted for one mesalamine delayed-release 800 mg tablet.

DELZICOL—unique dosage form

More patients with mildly to moderately active UC can experience DELZICOL

Patients who are unable to swallow the capsule whole can open the capsule carefully and swallow the contents (four 100 mg tablets).

- Open the number of capsules required to make up a complete dose
- There are 4 tablets per capsule. It is important that all tablets in each capsule are swallowed and no tablets are left in the mouth
- The tablets should be swallowed whole; they should not be cut, broken, crushed, or chewed
- Intact, partially intact, and/or tablet shells have been reported in the stool. Contact your healthcare provider if this occurs often

Please see Important Risk Information on pages 8 and 9, and full Prescribing Information available at www.DELZICOL.com.

Eligible patients may save on DELZICOL

- The DELZICOL Savings Card may help eligible patients SAVE per prescription fill
- Program Terms, Conditions, and Eligibility Criteria:
  1. This offer is good for use only with a valid prescription for DELZICOL® (mesalamine) delayed-release capsules at the time the prescription is filled by the pharmacist and dispensed to the patient.
  2. Depending on your insurance coverage, most eligible insured patients may save on each of up to six prescription fills. Check with your pharmacist for your copay discount. Maximum savings limit applies; patient out-of-pocket expense may vary.
  3. This offer is not valid for use by patients enrolled in Medicaid, Medicare, or other federal or state programs (including any state pharmaceutical assistance programs) or in private indemnity or HMO insurance plans that reimburse you for the entire cost of your prescription drugs. Patients may not use this card if they are Medicare eligible and enrolled in an employer-sponsored health plan or prescription drug benefit program for retirees. This offer is not valid for cash-paying patients.
  4. This offer is valid for up to six (6) prescription fills. Other applies only to prescriptions filled before the program expires on 12/31/18.
  5. Allergan reserves the right to rescind, revoke, or amend this offer without notice.
  6. Offer good only in the USA, including Puerto Rico, at participating retail pharmacies.
  7. Void if prohibited by law, taxed, or restricted.
  8. This card is not transferable. The selling, purchasing, trading, or counterfeiting of this card is prohibited by law.
  9. This card is not exchangeable. The selling, purchasing, trading, or counterfeiting of this card is prohibited by law.
  10. This offer is not health insurance.
  11. This card expires December 31, 2018.
  12. By redeeming this card, you acknowledge that you are an eligible patient and that you understand and agree to comply with the terms and conditions of this offer. 

Please see Important Risk Information on pages 8 and 9, and full Prescribing Information available at www.DELZICOL.com.
Sticking with DELZICOL

Make sure you understand the possible side effects and what to look for when taking DELZICOL. Immediately tell your doctor if you or your child feel any side effects (please see pages 8 and 9 for Important Risk Information). Your doctor can tell you if there may be a reason to stop taking DELZICOL.

Some patients have reported finding the DELZICOL capsule in their stool — either partially or fully intact. Tell your doctor if this happens to you repeatedly.

- It can be hard to remember to take your medicine every day. To get the most from your medications, it is important to take them exactly as prescribed by your doctor.
- Your symptom-free period may be caused by the medicine doing its job; so if you stop taking DELZICOL, your symptoms may return.

Working with your doctor

Successful treatment starts with your partnership with your doctor. Use the following tips to make your time with your doctor as valuable as possible:

- Have your questions ready
- Discuss your or your child’s diet
- Take notes during your visit

Remember, no matter how embarrassed you may feel talking about UC, your doctor has heard it all and is there to help you.

Go to www.DELZICOL.com for more resources to help you with your treatment.
